

MINI BLOWING JUNCTION BLOCK KIT

FIBER BLOWING MACHINES

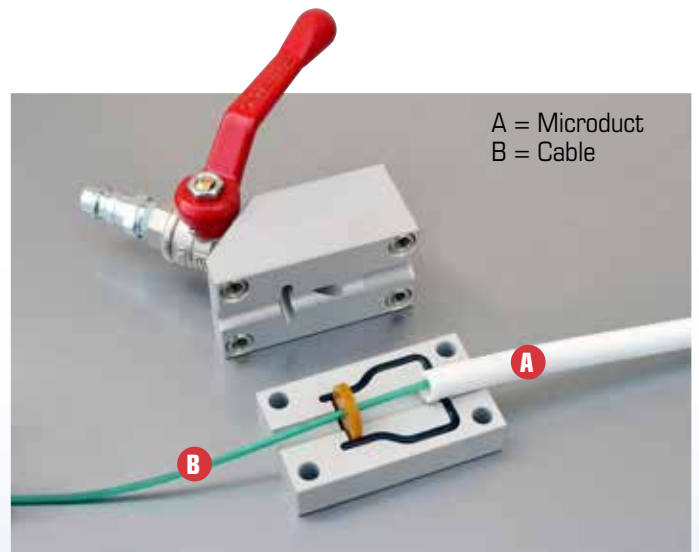

The Fremco Mini Blowing Junction Block is the perfect accessory for any fiber blowing engineer.

It can also be used to blow a cable (by hand in short distances) from a narrow spot where there is no room for a regular blowing machine or as a low cost hand held fiber blowing device.

It's made from surface treated aluminum and can withstand the air pressure being used in any fiber network. It uses the same type/size of seals as the Fremco Miniflow Rapid.

The Fremco mini blowing junction block is originally developed for straightening a cable when blowing in two directions, and there is a loop left because the regular blowing machine does not fit into the manhole/excavation.
